KEEP WHAT WORKS.
FIX WHAT GETS IN THE WAY.

The current site already has strong ingredients: family history, events, an ordering link, contact forms, analytics, and a CMS. The redesign makes that infrastructure easier to use and more unmistakably Tolbert's.

Working preview: task-first navigation, posted hours, a menu entry, and the next show.

Open the working preview >

01 / HOW IS THIS BETTER?

Three visible frictions, removed.

A searchable web menu instead of a PDF-only route. Live music that removes ended shows and labels freshness. Hours, directions, calls, ordering, sharing, and calendar exports where a guest can act.

Observable differences - not a sales claim.

02 / WHY PAY FOR IT?

Put the prototype to work. Keep it maintainable.

The paid work is production: connect owner data, reconcile menu records, preserve the established order path and analytics, correct event data, verify contact delivery, test the critical paths, and hand off a maintainable workflow.

The prototype demonstrates; owner systems make it real.

SAME TASK - SAME 390 X 844 VIEWPORT

A menu should behave like a menu.

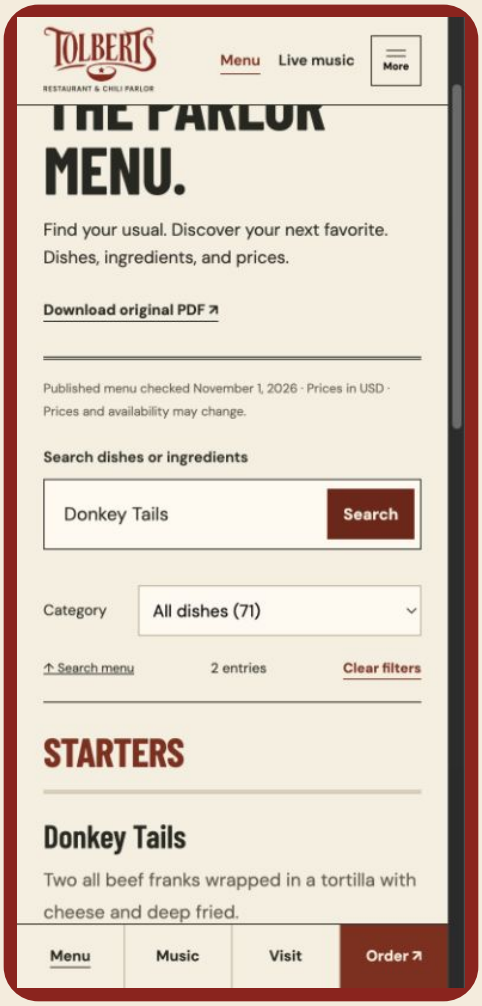

The official Menu route redirects to a two-page PDF. The redesign keeps the PDF available and adds a native, searchable 71-entry menu with categories, prices, and shareable query states.

CURRENT OFFICIAL MENU

390 x 844 viewport / PDF route

Open current menu >

WORKING REDESIGN MENU

390 x 844 viewport / searchable HTML

Open filtered demo >

01

FIND ONE DISH

Current - scan a two-page PDF. **Prototype** - Donkey Tails opens filtered, with its description and price.

TRY THE MENU >

02

PLAN A MUSIC NIGHT

Current, Nov. 2 - Oct. 11 promo and description placeholders. **Prototype** - weekend filter, ended-show removal, freshness label, dated saved list.

TRY WEEKEND MUSIC >

03

GET THERE

Current - hours, map, and phone sit near the page bottom. **Prototype** - today's hours and phone open the hero; Visit leads to full hours, directions, and calls.

TRY VISIT DETAILS >

Observed Nov. 2, 2026; current pages may change.

Current calendar > Current home > Audit >

A launchable system with a definition of done.

The current site has valuable infrastructure. Production should preserve it, repair specific gaps, and give the owners an approved way to keep the menu, music, hours, ordering, and contact current.

KEEP	KEEP	VERIFY
Official domain, CMS, analytics, ordering	Family story, real images, event source	Contact, newsletter, data ownership

ACCEPTANCE CRITERIA - INSPECTABLE, NOT ADJECTIVAL

MENU INTEGRITY	Owners approve one web menu against the restaurant menu and SpotOn. Prices, ingredients, policies, and update ownership are documented; conflicts are flagged, not guessed.
LIVE MUSIC	The approved CMS feed shows Central times and removes ended events and empty placeholders. A feed failure shows a dated saved list and the official-calendar link.
MOBILE PATHS	At 390px, Menu, Live music, Visit, and Order remain visible. Calls, directions, handoffs, filters, Back/Forward state, and errors are tested.
MIGRATION	Official URLs or redirects, analytics, contact, newsletter, the established order link, metadata, and Restaurant/MusicVenue/Event schema survive launch; event schema matches visible times.
HANDOFF	Approved claims and images; keyboard, screen-reader, reflow, reduced-motion, form, link, and real-device checks; publishing runbook; named update owner.

PROTOTYPE ALREADY DEMONSTRATES

- Menu search/share; call and directions links
- 20 browser viewport checks passed
- Dated list on feed failure and calendar download
- 34 checks passed: 16 music / 11 feed / 7 menu

PRODUCTION STILL REQUIRES

- Owner access and content approval
- Menu and order-data reconciliation
- CMS, analytics and contact integration
- Launch QA, staff handoff and update owner

PROPOSED 30-DAY MEASUREMENT - NOT INSTALLED AND NO RESULTS EXIST

With owner approval, record a pre-launch baseline and the first 30 days after launch for menu searches, calendar views, directions, calls, order handoffs, and completed contact submissions. Compare broken paths and drop-offs alongside traffic mix and event timing. These observations would not prove that every action or order came from the redesign.

Planning only: break-even actions = project fee / verified contribution margin per genuinely incremental action.
