# A working website Steven can test before he buys.

Guests can find food, choose a show and plan a visit. Steven can update routine information in a shared editor. The official Tolbert's website stays in place during a complimentary review.

**COMPLIMENTARY, SUPPORTED EVALUATION**

**cmcnosky.github.io/tolberts-preview/**

**No deposit. No obligation to launch.**

**01 / FOOD**

### Find a dish.

Search the 71-entry preview menu, filter categories, share a result and continue to Tolbert's existing ordering service.

**02 / MUSIC**

### Choose a night.

See a listed artist and set time, filter upcoming shows, and open one place for the menu, seating call, directions, sharing and a one-time calendar reminder.

**03 / VISIT**

### Plan the trip.

Today's hours, Main Street location and phone number sit near the top. Full hours, directions, a parking guide, rail information and ordering stay close.

## WHAT STEVEN CONTROLS - AND WHAT CHRIS HANDLES

**ROUTINE SELF-SERVICE**

Steven's defined controls cover dishes, categories, prices, descriptions, availability and photos; artists, show dates and set times; weekly hours and special closures; and the supplied website text, image and link fields. Confirmed saves update the shared preview.

**FULL CUSTOMIZATION SERVICE**

The editor is for routine fields, not arbitrary page building. Chris handles requested content, design, layout, navigation, new pages, features, publishing, maintenance and website integration work under the service on page 2.

## PROOF STEVEN CAN REPEAT

1. **Find Donkey Tails.** Search the menu and inspect the result and price.
2. **Choose a listed show.** Open its details, directions, call and sharing actions.
3. **Publish a labeled test.** With Chris, save it, see it publicly, remove it and reload.

Nov. 9 checks: 24 guest-page loads and 36 owner-section loads at 320 / 768 / 1280 px showed no page overflow, broken loaded images or observed console errors. An unavailable test dish with an uploaded photo persisted through owner reload but was not shown publicly. Separately, a labeled homepage announcement appeared in another public tab. Restore returned the 71-entry baseline and removed the notice. Source checks covered calendar, menu, music, publishing, persistence, authorization and data bounds. These checks do not prove uptime, security, physical-device behavior, preference or sales.

# Why this is worth paying for.

It is a working guest website plus a shared owner interface, not a design picture. Steven can test the useful parts, ask for a change and judge the result before negotiating the build price.

**01** **Lower purchase risk.**

The evaluation is complimentary. Tolbert's current official site remains untouched while Steven reviews the preview.

**02** **A site the restaurant can keep current.**

Steven can make routine updates himself; Chris remains available for broader changes and maintenance.

**03** **Time to fit the site to real use.**

The build includes three calendar months of customization after launch, so guest and staff feedback can shape the result.

**04** **Known support at a predictable labor price.**

Optional month-four care keeps all requested website changes with the person who already knows the system.

**BUILD PRICE**

## Fully negotiable.

No build price is set here. Chris and Steven agree the total, payment schedule, launch responsibilities and acceptance checks in writing before paid launch work begins.

**FIRST 3 CALENDAR MONTHS**

Beginning on the agreed official launch date, all website customization, fixes, publishing, maintenance, help with the editor and website integration labor are included with no additional labor charge whatsoever. The agreement records the included-care end date and earliest optional billing date.

**OPTIONAL FROM MONTH FOUR**

## $200 / month

The $200 monthly service/labor fee covers all requested changes and maintenance to this website, with no hourly cap or per-change labor fee. The plan is optional and month to month, with no automatic enrollment. Chris and Steven agree priorities and timing together.

**DIRECT HELP**

During support hours agreed in writing, Chris aims to acknowledge a request within 30 minutes, then confirm the next step and timing. This is a target, not a guaranteed response or completion deadline and not 24-hour coverage.

## COST AND CONNECTION BOUNDARIES

Outside charges such as domain, hosting, data and email-service fees require Steven's approval and remain separate in every period. Provider access, cooperation and account eligibility may be required. Payments, supplier ordering, POS, payroll, real inventory systems and staff notifications are not connected. The PDF, SpotOn menu and old official calendar do not update automatically when this website changes. Workspace-data export/restore exists; a complete photo-object and hosting recovery plan remains launch work.

**NEXT DECISION: Try the site, choose one mutually agreed preview change, then decide whether to negotiate the build and launch terms.**
